PROFILE

Design engineer with ten years across product design and front-end development. I take a brief through research, interface design and production build without a handover in the middle, so what gets signed off in Figma is what reaches the browser. Most recently the front door for a cross-border neobank that now takes around 100,000 visitors a day, and a festival site that helped secure close to \$100,000 in sponsorship. I work in WordPress, Webflow and Framer, and write HTML, CSS and JavaScript when a project deserves something bespoke.

EXPERIENCE

Sep 2025 – Present · Contract	Visual designer and WordPress developer BMONI Cross-border neobank on stablecoin rails, live in Nigeria and Mexico. Designed and built the marketing site that fronts a platform which has since processed over \$1 billion in transactions, and which now takes roughly 100,000 visitors a day. Structured the page around the decision a switching customer actually makes, with four product claims each earning their own section instead of being flattened into a feature grid. Shipped a market switch above the fold for an audience split across two continents, and carried a second market live on the same template set.
Apr 2025 – Present · Contract, two editions	Web designer and WordPress developer Africa Blockchain Festival Africa's largest blockchain festival and tokenisation summit, Nairobi. Designed and built the site for an edition that secured close to \$100,000 in sponsorship, with the site working as the primary pitch surface for partners evaluating the event. Separated the sponsor funnel from the ticket funnel, because a \$50 attendee and a \$25,000 sponsor are not the same visitor and a single path serves neither well. Resolved every section, breakpoint and state in Figma before the build began, against a fixed event date that made mid-build renegotiation impossible. Retained for the 2026 edition on the strength of the first, which the team has run through a full campaign cycle themselves.
May 2023 – Aug 2025 · Full-time, remote	Lead designer ICP Hub Kenya The DFINITY ecosystem's primary hub in East Africa. Designed and launched the official website and visual identity for the hub, and owned all social and branding material across two years. Helped position the hub as a DFINITY-backed success story, contributing to over \$500,000 in ecosystem grants. Improved developer and partner onboarding through clearer navigation and a route through the site that matched what each audience had come to do. Recommended into the sister hubs in the United States and Germany on the strength of the work.
Feb 2025 – Mar 2025 · Contract	Product designer ICP Hub USA Designed the website UX and UI, and the social creative suite, for the US arm of the ICP ecosystem's global expansion. Built responsive layouts and Figma prototypes aimed at three separate audiences: developers, investors and prospective partners.

Mar 2025 – Apr 2025 · Contract	Visual designer ICP Hub Germany Delivered Web3 campaign content for the German hub’s channels and community programmes. Held visual consistency across the European hub presence with a shared set of branded templates.
Feb 2023 – Apr 2023 · Contract	Product designer THNDR Games Led UI design for Bitcoin Blocks, a casual play-to-earn game built on Bitcoin, through to a successful launch. Designed the interface logic, the gaming dashboard and the user progression system, working directly against the engineering constraints of the platform.
2018 – 2022 · Full-time	Visual designer, then product designer Bitnob African consumer fintech. Joined as a graphic designer owning the full creative suite for an early-stage brand, and was promoted into UI and product design. Worked directly with product and engineering on the core consumer app and its supporting dashboards, across four years of the company’s growth. Contributed to the brand and product experience behind Bitnob securing over \$5 million in venture funding.
2016 – 2018 · Freelance	Freelance designer and web developer Self-employed Designed and built websites for independent clients, and took on brand and campaign work alongside them. Where the graphic design and front-end foundation came from, and the reason the later product work never needed a handover.

SKILLS

Design

Figma, Design systems, Interaction design, Prototyping, Responsive layout, Accessibility

CMS and no-code

WordPress, Custom themes, ACF, Webflow, Framer

Front-end

HTML, CSS, JavaScript, GSAP, Vite, Motion design

Performance and search

Core Web Vitals, Semantic markup, Structured data, Technical SEO, Image pipelines

SELECTED WORK

BMONI	Neobank front door. ~100K visitors a day, \$1B+ processed on the platform it fronts.
Africa Blockchain Festival	Two editions. ~\$100K sponsorship secured, three languages, client-owned content model.
ETHSafari	Art direction and WordPress build for a pan-African Ethereum event.
ICP Hub Kenya	Website and identity for the DFINITY ecosystem hub in East Africa.

EDUCATION

BSc, Urban Design, Obafemi Awolowo University, 2021
